Milad Teimouri

Principal Software Engineer

milad72t@gmail.com Tehran, Iran Profiles:

SUMMARY

Principal Software Engineer with 9+ years building high-traffic backend platforms in e-commerce and billing. On the platform (core) team at Digikala — the largest e-commerce platform in the Middle East — I set technical direction for the migration from a monolith to microservices at 200k+ RPS, own cross-team architecture decisions, and grow engineers through mentoring, design review, and hiring. Primary stack **Java / Spring Boot**, with a deep background in PHP, distributed data systems, and Kubernetes.

EXPERIENCE

Principal Software Engineer – Platform (Core) Team **Digikala**
October 2020 – Present *+6 yrs*

- Digikala Group is the largest e-commerce platform in the Middle East, with +50M visitors and +10M orders per month.
- Set the technical direction for the company's migration from a monolith to microservices, delivering the shared infrastructure and in-house framework that carries **200k+ RPS** across **200+ services**.
- Own cross-team architecture decisions and design reviews; define the patterns, standards, and guardrails product teams build on, and drive adoption of new technologies across the organization.
- Mentor engineers and enable teams across **tribes company-wide**, coaching them to solve their own architecture and platform problems; lead onboarding, run technical interviews, and shape team structure.
- In the shopping squad, rewrote and refactored the legacy shopping APIs of digikala.com, introduced a **CQRS** read model for products, and designed & built Magnet, an Instagram-like social commerce platform.
- Main technologies: **Java / Spring Boot**, **PHP**, **Kafka**, **MySQL**, **MongoDB**, **Elasticsearch**, **Redis**, **Kubernetes**, **ArgoCD**, **GitLab CI**

Backend Software Engineer **Andishe Computer**
September 2017 – October 2020 *3 yrs*

- Launched a billing system used by national electricity companies, handling data for over **10M** power subscribers.
- Built bargheman.com, a subscriber surveillance and bill payment system created to eliminate paper bills.
- Structured an automated payment processing system that reconciles financial data from multiple banks (~2k documents per day), routes it to each power distributor, and generates financial reports — removing the manual process entirely.
- Main technologies: **PHP / Laravel**, **SQL Server**, **MongoDB**, **Redis**, **Docker**, **Python**, **C++**

Backend Software Engineer **Behpardaz Pishro**
April 2017 – September 2017 *6 mth*

- Delivered a system for the Ministry of Power aggregating and reporting on **32M** electricity subscribers nationwide. **Laravel**, **Oracle**, **MongoDB**.

SKILLS

- **Leadership**: technical direction & architecture review, mentoring and career growth, hiring & interviewing, onboarding, cross-team alignment
- **Architecture**: Microservices (API-GW, CQRS, SAGA, Event Sourcing), event-driven & distributed system design, monolith-to-microservices migration
- **Languages**: Java (Spring Boot), PHP, Golang, Python, C++
- **Data**: Database design and query optimization — MySQL, SQL Server, Oracle, MongoDB, Elasticsearch, Redis, Kafka
- **Platform**: Kubernetes, Docker, GitLab CI, ArgoCD (GitOps), Apache APISIX, SSO / Keycloak (OAuth2, OIDC), Linux & server maintenance
- **Observability**: Prometheus, Grafana, OpenTelemetry, InfluxDB

EDUCATION

M.Sc. Computer Networks Engineering — Second Rank, GPA 17.89/20 *Iran University of Science and Technology*
2016 – 2018

B.Sc. Computer Engineering — Third Rank, GPA 16.85/20 *Iran University of Science and Technology*
2012 – 2016
